PROFESSIONAL SUMMARY

Computer Science graduate with practical experience in Full-Stack and Backend Development using MERN stack, REST APIs, SQL/NoSQL databases, and cloud-based systems. Experienced in developing scalable web applications, backend services, browser-based platforms, and multiplayer systems. Strong understanding of operating systems, networking, databases, API development, and system design. Seeking Full-Stack or Backend Engineering opportunities to contribute to scalable software products and distributed systems.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Rust, SQL, C, x86 Assembly.

Frontend: React.js, HTML5, CSS3, Tailwind CSS, Canvas API.

Backend: Node.js, Express.js, Flask, REST APIs, GraphQL.

Databases/Cloud: MongoDB, PostgreSQL, MySQL, Supabase, AWS.

Tools: Docker, Git, Linux, GitHub Actions, Postman, QEMU.

EDUCATION

B.Tech in Computer Science and Engineering : *Graphic Era Hill University*

2022 – 2026

Relevant Coursework: Data Structures and Algorithms, Operating Systems, Computer Networks, DBMS, Machine Learning, Artificial Intelligence, Web Development.

PROJECTS

Project Syndicate | Python, Node.js, LLM APIs

2025 – Present

- Built a multi-agent AI collaboration platform where autonomous agents coordinate workflows and task execution.
- Developed orchestration systems, shared memory pipelines, and AI-driven customer support workflows.
- Integrated decentralized wallet systems and collaborative development tooling for automated execution pipelines.

Project D-RAP | Rust, Go, SvelteKit, PostgreSQL, Docker

2025 – Present

- Engineered a high-performance tunneling platform using asynchronous Rust (Tokio) and Go to securely expose local services via a unified relay server.
- Developed a real-time SvelteKit dashboard backed by PostgreSQL for deep HTTP traffic inspection, header monitoring, and bandwidth tracking.
- Implemented multi-tunnel orchestration using YAML configurations, secured streams with TLS 1.3 encryption, and containerized the stack via Docker.

Project Flow | No-Code Full-Stack Platform

2025 – Present

- Conceptualized and built a visual programming-based, no-code platform enabling users to create complete full-stack applications without prior programming knowledge.
- Designed an intuitive drag-and-drop interface that seamlessly maps visual logic to scalable frontend and backend architectures.
- Engineered automated translation layers to convert user-designed visual workflows into functional, deployable application stacks.

Project E4K | Phaser.js, Supabase

2025

- Developed a browser-based multiplayer strategy game with real-time synchronization and cloud-hosted player systems.
- Integrated Supabase authentication, multiplayer state management, and leaderboard systems.
- Optimized rendering and gameplay performance for smoother browser-based interactions.

Project Retro-OS | C, x86 Assembly, Systems Programming

2024 – Present

- Built a custom x86 operating system with kernel-level memory management, task scheduling, and interrupt handling.
- Developed filesystem modules, process management systems, and low-level hardware interaction components.
- Implemented GUI rendering systems, networking modules, and foundational HTML/CSS rendering support.

Project Kite Browser | Rust, Rendering Systems

2025 – Present

- Developing a browser engine with custom HTML/CSS parsers, DOM tree generation, layout computation, and rendering pipelines.
- Built tokenizer systems, CSS style resolution, paint ordering, and rendering inspection utilities.
- Focused on browser internals, rendering optimization, and runtime architecture design.

LEADERSHIP AND ACTIVITIES

- Led university software engineering teams during collaborative technical projects.
- Active in systems programming, backend development, and open-source learning initiatives.
